

RapidReconciler Helps Carling Technologies Streamline their Inventory Reconciliation Process

The Company

Founder Arthur Carling established the Carling company in 1920, when he discovered his calling while working with tools, dies, and specialized machinery and quickly recognized the vast opportunity in the emerging electrical industry. However, within a few years began to direct Carling Tool & Machine which expanded into this area.

Today, the company now ranks among the world's largest privately owned manufacturers of hydraulic magnetic circuit breakers, thermal circuit breakers, electrical switches, and assemblies, power distribution centers, digital switching systems, and electronic controls.

Globally, there are over 2,000 employees working for Carling, providing solutions to customers' applications needs with innovation, value, and world-class service for both standard and custom products. Carling's breadth and depth of standard product offerings give customers literally millions of configuration choices to meet the demands of its strategic markets.

"We now use RapidReconciler® on a daily basis to ensure our inventory remains in balance. It allows us to identify and resolve all of our reconciling items. It is a valuable tool and an integral part of our audit process."

Linda Ferguson,
Controller
Littelfuse/Carling Technologies

COMPANY SNAPSHOT

Company:	Littelfuse/Carling Technologies
Headquarters:	Plainville, CT, USA
Other Locations:	Pennsylvania, Texas, England Germany, France, Hong Kong, Mexico, Various Locations in China and Japan
Founded:	1929
Size:	Over 2000 Employees
Industries Served:	Electronics, Transportation, Industrial Controls, Appliances, Factory Automation
Products & Services:	RapidReconciler®

The Issues

Each month Carling Technologies was spending a significant amount of time as well as manual effort researching and reconciling variances between their inventory and the general ledger in JD Edwards, while addressing these issues with the auditors at year's end. These variances were the result of AAI mapping problems, cardex discrepancies, setup problems as well as procedural, timing, and third-party software issues.

While at a Quest User Conference, they discovered RapidReconciler® and were immediately impressed with its functionality. The product would allow them to easily identify the root cause of reconciling issues and prevent many of them from occurring in the future. RapidReconciler® would also decrease the time and effort required to identify and correct outstanding reconciling items. Based on their analysis, they decided it was the perfect solution to address Carling's inventory issues and decided to purchase it.

The Results

Linda Ferguson, the Controller at Carling, was most impressed with the results achieved once the solution was installed at Carling. "We now use RapidReconciler® on a daily basis to ensure inventory remains in balance with the general ledger in JD Edwards. We can immediately identify and easily resolve variances daily resulting from various cardex discrepancies, batch posting problems, work orders issues, and other reconciling items."

Linda also discussed the ability of the product to identify the root cause of issues so they could be prevented in the future. "RapidReconciler® identified AAI, warranty, and other setup issues that were causing us to be out of balance.

We were able to correct these setup issues and prevent the discrepancies from occurring in the future. It also identified a receiving issue caused by a third-party software tool. Carling was able to quickly address and correct this issue with the tool provider. RapidReconciler® is also an invaluable tool during the audit process, providing a complete audit reconciliation report and audit trail for each reconciling item. We can run it at any time for any period ending date.”
